

**SFS intec designer pivot hinge:  
Cab-R for flush fit doors**

Adjustment, 180° opening and aesthetics, are the most important characteristics of this innovative hinge for flush fit doors. This hinge has been designed to be easily and economically fitted to both left and right handed doors.

The adjustments can be made when the door is in situ with a simple Allen key.

A horizontal adjustment of +/- 3mm can be easily be done on the sash part of the hinge.

In the meantime the frame part of the hinge permits a gasket pressure adjustment of +/- 1,5mm.

The rotation fulcrum is a pin set in a selflubricating material which guarantees smooth and silent operation and avoids servicing and is also maintenance free.

SFS intec has created a complete product system which consists of the hinge, cover caps, which are available in different colours and are applied to the internal part of the frame and an installation jig.

Technically reliable, the new pivot design hinge has been tested to 200.000 cycles with loads of up 70 Kg.
